2 Introduction

2.1 Overview

For better implementation C boot logo customization platform terminal products, as well as the realization of the under the standby screen saver, developing production specifications, for custom personnel, the production of end user reference.

2.2 Target Audience

This document is for the production of standby display screen saver content need to end users (or terminal, maintenance of customer), and version custom custom synthesis using a boot logo version.

2.3 Glossary

<Put Glossary table here if any, example:>

<Name> <Description>
CNG Comfort Noise Generation. By incorporating with VAD and silence
compression and generate artificial background noise to save bandwidth
and improve talking experience.

2.4 Reference

<Put reference document or URL here>

3 <Make screensaver file>

3.1 <Manufacture step>

Fanvil C platform terminal screen saver and boot logo files, are based on the specified pixel size, monochrome black-and-white BMP file, use BMP2LCD software into binary data file, and then through the system to download, or fw custom synthesis to application.

C platform terminal equipment according to the screen size is divided into two kinds: 128 x64 pixels (series 62), 128 x48 pixels (58/52/01 series).

The first step, need according to the customer provide the logo of material, through the graphic black and white and BMP file conversion. For example, the customer to provide the corresponding logo pictures, need by our graphic design to convert the pixel size of the corresponding products, and then provided to producers. Below is the size of 128 x64 BMP file instance black and white.

🐼 fonewise

The second step is to run bmp2lcd software.Preparing a BMP file conversion.

Click file - > open, and then choose to convert BMP file, then open.

At this point the generated content is system used in the actual display of binary content. Then click save font. Software will pop up save dialog box, save the file to any location.

Note1: if you use bmp2lcd software failed to open the BMP file, there is only one possible BMP file is monochrome (24 color, for example), you need to use the drawing open the BMP file, then save as new BMP file at the same time, select monochrome a save.

Use notepad to open the preservation of the binary content file, ready to Fanvil C platform system screensaver files the content of the final revision.

0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00), 0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00. 0x00. 0x00.	. 0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00.	0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00,

After deletion, it is necessary to add content on the first "{", then add in the tail "}", then add in "{" after adding corresponding pixel size parameters of the screensaver file: 128 x64 screensaver files, for example, you need to add "0 x80, 0 x40,", 128 x48 screensaver file, you need to add "0 x80, 0 x30" (Note: the first parameter to the size of the screen saver or boot LOGO, the second parameter is the width of the LOGO).

Finally, save the file changes, and change the file name to screensaver. TXT, then you can through the web ws-security ws-security to download, then standby shows

Boot logo customization process exactly the same as that of the above, just the last set the file name to as bootlogo. TXT, then added to the mmiset1 directory to use synthetic can.
